Recruiter Guide — Resumes & Pipeline

A practical walkthrough of the two flows you'll use every day:

1. **Uploading resumes** so candidates land in the system.
2. **Moving a candidate through the pipeline** — Pitch → Send Out → Submission → Interview → Offer → Placed.

1. Uploading resumes

There are three places you can drop a resume. Pick the one that matches what you're doing.

A. Bulk upload from the Candidates page

When: You have one or more resumes and want them parsed into candidate records (not yet attached to a specific job).

1. Go to **Candidates** in the left nav.
2. Click **Upload Resumes** in the top toolbar (next to *Ask Joe*).
3. Drop files into the zone, or click to browse. Multiple files at once is fine.
4. **Accepted file types:** PDF, DOC, DOCX, TXT.
5. The AI parses each file and shows you an extracted preview — name, email, phone, current title/company, location, LinkedIn URL.
6. Edit any field that looks off, then click **Save**.
7. Behavior:
 - If the email matches an existing candidate, that record is **updated** (not duplicated).
 - If it's new, a fresh candidate is created.
 - The resume file is stored on the candidate and indexed for search / Joe.

If a file fails to parse, you'll see it surfaced in the Orphan Resumes tab (Settings → Admin). The system retries automatically.

B. Attach a resume to an existing send-out

When: A candidate is already in the pipeline for a job and you want to attach (or swap) the version that goes to the client.

1. Open **Send Outs** (or the **Job Detail** page).
2. Click the candidate row to open the sidebar drawer.

3. In the send-out card, click **Upload Resume**.
4. The new resume is attached to that send-out specifically (without overwriting the candidate's master resume).

C. Drop a resume from the candidate's profile

When: You're already viewing a candidate and want to add another resume version to their profile.

1. Open the candidate's detail page.
2. Use the **Resume drop zone** in the Resume section.
3. Drag-and-drop or click to browse.

2. The pipeline: Pitch → Send Out → Submission

Every job has its own pipeline of candidates. A candidate's position in the pipeline is tracked as a **send_out** row — one per (candidate, job) pairing.

Stages

The canonical stage order in the system:

Stage	What it means
Pitch	Candidate is qualified — you haven't yet pitched the role to them.
Send Out	Candidate has been pitched and agreed. Queued to send to the client.
Submission	Candidate has been formally submitted to the client. Waiting for feedback.
Interview	Candidate is in the client's interview process. Round tracked separately.
Offer	Client has extended an offer.
Placed	Win — candidate accepted and started.
Withdrawn	Terminal exit — candidate or client backed out.

Adding a candidate to the pipeline (entering at "Pitch")

You've got two ways in:

Option 1 — From the Send Outs page

1. Click **+ New Send Out** (gold button, top-right).

2. Pick the candidate and the job.
3. Stage defaults to **Pitch**. Hit save.

Option 2 — From the Job Detail page

1. Open the job.
2. Click **Add to Pipeline** in the header.
3. Pick the candidate. They're added at **Pitch**.

Moving between stages

Three ways to advance a candidate. Use whichever's faster for the situation.

1. Drag-and-drop (Send Outs page)

- Grab the candidate card and drag it into the destination stage column.
- The target column auto-expands when you hover.
- Desktop only.

2. The Advance arrow (per-row)

- The  button on the right side of each row.
- Moves to the **next stage in order**. Can't skip stages this way.

3. The "Move to" picker (sidebar drawer)

- Click any row to open the drawer.
- Tap any other stage chip in the **Move to** section.
- This is the only way to jump backward or skip multiple stages.

What happens at each transition

Transition	What pops up
→ Send Out	Notes dialog — capture a quick "ready to send" note.
→ Submission	Notes dialog — pre-fills with the prior stage's note so you only edit what changed.
→ Withdrawn	Reason dialog — capture <i>why</i> (client decision, candidate declined, recruiter pull).
Anything else	Move happens instantly.

Recording what you actually submitted (Submission stage)

When you click a row in the **Submission** stage (or any later stage), the sidebar shows a **Submitted to client** card. Fill it in so the record matches what you actually told the client:

- **Base comp range** — e.g. **120k** and **140k** (shorthand works: **120k** , **120,000** , **\$120k** , **1.2M** all parse).
- **Bonus comp range** — same shorthand.
- **Right to work here** — free text: **US Citizen** , **H1B** , **Sponsorship required** , etc.

Click **Save submission details**. These values are snapshotted on the send-out, so changing the candidate's profile later won't rewrite history.

What you see on the Send Outs page

- **KPI tiles** at the top: pitches, send-outs, submissions, interviews, offers, projected fee.
- **Filters**: search by name/title/company, filter by job, recruiter, date range.
- **Stage columns**: each stage is its own collapsible table. Click the header to collapse a column.
- **Per-row info** (in order): candidate name + role + company, stacked **Base / Bonus** comp range, **RTW** status, last touch date, days in stage, next-step note, action buttons.
- **Action buttons** (right side of each row): email, SMS, call, LinkedIn, notes, advance arrow, open profile, delete.

Daily flow at a glance

1. **Morning** — upload any new resumes from the Candidates page (Flow 1A).
2. Triage new candidates → drop them into jobs at **Pitch** stage.
3. As you pitch each candidate, move them to **Send Out**.
4. When you submit to the client, move to **Submission** *and fill in the Submitted to client card* (base + bonus + RTW). This is what protects your record of what was sent.
5. As feedback comes in, advance to **Interview** → **Offer** → **Placed**, or move to **Withdrawn** with a reason.

Troubleshooting

- **Resume didn't parse**. Check Settings → Admin → Orphan Resumes. The system retries on its own; if a file's been stuck for >1 hour, drop a note to engineering.
- **Wrong candidate matched on email**. Open the candidate from the parse preview before saving — you can pick "Create new" instead of updating the matched record.
- **Comp / RTW look wrong on a past submission**. Open that send-out's drawer and edit; the changes save to that send-out's record only.

- **Need to move a candidate backward.** Use the **Move to** picker in the drawer — the per-row Advance arrow only goes forward.
